ENGINES

Proficient C# · Unity · Godot · GDScript
Working Kotlin · Python · Git
Platforms Android · iOS

GAMEPLAY

Real-time combat · ability and card systems · state machines · damage pipelines · save-schema migration

LIVE OPS & F2P

Cloud save · cloud sync · server-driven remote config · leaderboards · push · analytics · rewarded video · IAP integration · store compliance

ECONOMY

Sources and sinks · premium-currency placement · daily and progress task economies · FTUE retention · balance tuning

ALSO

Grandmaster in Teamfight Tactics, EU. Where the balance agent came from.
Commissioned pixel art. Why shipping solo was possible.

Two commercially shipped mobile titles. One live on two stores, one shipped solo.

SHIPPED

- **Stepland** · Godot · iOS + Android · live on Google Play and the App Store *Somni Game Studios*. 128 files in the shipped game are mine, and 7 of its 16 services.
- **Dungeon Heroes** · Unity · Android · closed testing on Google Play *Solo: design, code, art, UI, release*. ~20,100 lines of C#.
- **Degen Crawler** · C# · browser · degendungeons.com *Gameplay programmer*. ~20 relics and the Seashore biome.

EXPERIENCE

Somni Game Studios · Technical Designer & Gameplay Programmer

2025 – 2026 · Barcelona, remote · core programming trio in a larger team

- Replaced a Health Connect dependency with an in-house Android pedometer plugin.
- Wrote it in Kotlin, a language I had not used, in a week. 211 of its 212 lines.
- Designed and built the two-tier task economy: staged rewards, currency placement.
- Built the exploration feature greenfield. 87% of it mine, 16 unit tests.
- Drove the tutorial rebuild: 82 declarative steps, ~76% of it, for the 4YFN showcase.
- Owned app boot, cloud sync, remote config and the streaks retention feature.
- Demoed on stand at Gamescom, Godot Fest, BCN Game Fest and 4YFN.

Purple Pwny Studios · Gameplay Programmer

2023 – 2024 · remote, US studio

- Designed and implemented ~20 relics from a name and an icon. The mechanic was mine.
- Extended the engine where it could not support them: shop pricing, currency actions.
- Authored the Seashore biome: six enemies, its boss ability, the Tenderize effect.
- Built the balance agent under Monte Carlo simulation. Hand-authored rules, not ML.
- Built the Degen Drafts Unity client end to end, ~86% of it.

Freelance · Pixel art and contract development

2024 – 2025

PROJECT

Dungeon Heroes · solo

- 102 abilities on a cycling four-slot card system, resolved through a staged damage pipeline.
- Live ops integrated: cloud save, leaderboards, analytics, push, ads, IAP. Versioned saves.
- Built the multi-agent pipeline that generates the game's UI screens.
